

Download Popover Requires Tooltip.js

Only one plugin per element via data attributes. Don't use data attributes from multiple plugins on the same element. For example, a button cannot both have a tooltip and toggle a modal. About transitions. For simple transition effects, include bootstrap-transition.js once alongside the other JS files. If you're using the compiled (or minified) bootstrap.js, there is no need to include this—it's already there. Use cases. A few examples of the transition plugin: About the project. AngularStrap is a set of native directives that enables seamless integration of Bootstrap#^3.0 into your AngularJS#^1.2 application. Only one plugin per element via data attributes. Don't use data attributes from multiple plugins on the same element. For example, a button cannot both have a tooltip and toggle a modal.
